DHANUSH S

FULL STACK ENGINEER (LATERAL ENTERPRISE SYSTEMS)

+91 6374431152 | itdhanush68@gmail.com | Sathy, Erode | LinkedIn

PROFESSIONAL SUMMARY

Results-driven Full-Stack Engineer with 1.5+ years of hands-on experience architecting multi-tenant SaaS platforms, real-time microservices, cross-platform mobile apps, AI-integrated applications, and automated business systems. Proven track record executing end-to-end software delivery across backend frameworks (NestJS, .NET Core) and scalable frontend ecosystems (React, React Native, Angular). Early adopter of AI-assisted software engineering practices to accelerate product development while maintaining data integrity and type safety.

TECHNICAL SKILLS

Backend & Architecture: NestJS, .NET Core Web API, Microservices, RESTful APIs, Multi-tenant Architecture
Frontend & Mobile: React, TypeScript, React Native, Angular, State Management
Databases & Real-Time: MySQL, Database Schema Design, MQTT Protocol
Security & Operations: JWT Authentication, Role-Based Access Control (RBAC), Plesk Hosting, Git
Logging & Observability: Winston, Serilog
AI-Augmented Engineering: Claude Code, Codex, Open Code, Ollama, Stitch, Antigravity — AI-driven solution design & rapid delivery

PROFESSIONAL EXPERIENCE

Full-Stack Engineer — Trofeo Solutions | Coimbatore
Feb 2026 – Present

- Built an Inventory Management platform with a NestJS backend and MySQL database, designing schema indices to support real-time stock-tracking metrics.
- Developed a cross-platform React Native mobile application for sales/field agents, using strict TypeScript typing to reduce runtime errors during order capture and checkout.
- Designed a multi-module Company Management system covering internal resource allocation, employee tracking, and cross-department operations.
- Built and integrated AI-driven features into business applications to automate workflows and reduce manual effort.
- Introduced AI-assisted development workflows (Claude Code, Codex, Open Code, Ollama) to speed up feature delivery.
- Owned end-to-end deployments via Plesk hosting, collaborating directly with stakeholders on architecture decisions.

Program Analyst — QwickSoft Solutions Pvt Ltd | Chennai
Nov 2024 – Dec 2025

- Developed and maintained production-scale SaaS web and mobile applications on an Angular frontend and .NET Core backend.
- Implemented secure access frameworks using JWT-based authentication and role-based access control (RBAC) for multi-tenant security.
- Contributed to an event-driven microservices setup using the MQTT protocol to support real-time data-syncing.
- Collaborated across frontend and backend teams to troubleshoot and optimize SQL queries, improving API response times.

CORE COMPETENCIES

AI-Integrated Applications & AI-Driven Development
Impact: *Integrated AI capabilities into business apps and used AI coding tools (Claude Code, Codex, Ollama) to ship features faster.*

Multi-Tenant SaaS Architecture
Impact: *Designed data-isolation layers and secure session handling using JWT authentication for multi-tenant client platforms.*

Real-Time Systems & Microservices
Impact: *Built asynchronous, event-driven services with real-time data-syncing and structured logging for live diagnostics.*

Database & Schema Design
Impact: *Modeled one-to-many and many-to-many relational entities to maintain data consistency across high-volume transactions.*

Cross-Platform Mobile Engineering
Impact: *Delivered React Native applications with strict TypeScript typing to minimize runtime errors in production.*

AREA OF INTEREST

Backend Engineer | Full Stack Engineer
